APTIVORA GLOBAL SOLUTIONS PVT. LTD. PRESENTS HOSPITAL ASSISTANCE PLATFORM

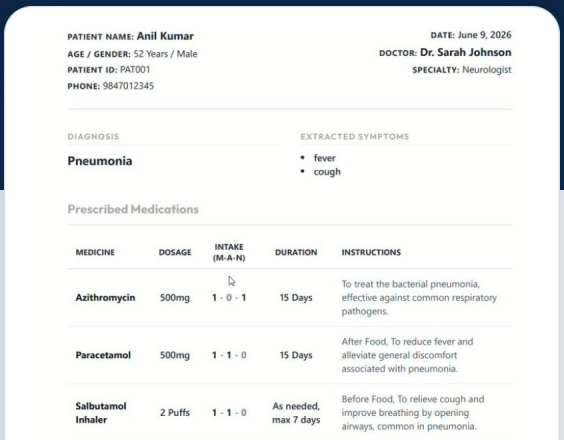

RxQuill

The AI consultation assistant that listens, so doctors can care.

Turns the doctor–patient conversation into a confirmed diagnosis, tests and a printed prescription in minutes.

Symptoms heard → diagnoses ranked → doctor confirms

Clean, typed prescription — ready to print

Less writing. More patient time.

01 — Load patient
History, allergies and past medicines on one screen

02 — Talk naturally
Consultation recorded in the background, no typing

03 — Review & confirm
Diagnosis, tests and medicines suggested for approval

04 — Print & save
Prescription, schedule and summary saved to the record

Ambient audio capture
Listens to the consultation; the doctor keeps eye contact, not the keyboard.

Malayalam + English
Understands natural code-switching, the way Kerala consultations really sound.

Clinical decision support
Extracts symptoms, ranks likely diagnoses and recommends tests.

Pharmacy-aware prescriptions
Suggests in-stock medicines with dose, M-A-N timing and duration.

Reads scans & reports (OCR)
Lab reports, scan reports and old prescriptions become searchable records.

Silence protection
No clear speech, no output: the AI never fills gaps by guessing.

FOR HOSPITAL MANAGEMENT

- **Legible, standard prescriptions**
- **Faster, smoother OPD flow**
- **Data stays on-premise or in India**
- **Doctor approves every output**
